

Safflower XVI-2

Thrips

Gary L. Hein

Thrips.

Thrips are tiny (one to two millimeters in length) cigar-shaped insects that congregate and feed under the bracts of the buds and in the flowers. Their feeding results in blotchy streaks on the bracts and leaves. The buds may turn bronze-colored and resulting heads may be somewhat deformed.

Product List for Thrips:

Insecticide	Product per Acre	Preharvest Interval, Remarks
Supracide 25WP ^R , 2E ^R	25WP: 2.0 lbs/A 2E: 2.0 lbs./A	PHI 28 days; REI 48 hrs.

^RRestricted use pesticide ^ILabelled for chemigation.

The information herein is supplied with the understanding that no discrimination is intended and that listing of commercial products, necessary to this guide, implies no endorsement by the authors or the Extension Services of Nebraska, Colorado, Wyoming or Montana. Criticism of products or equipment not listed is neither implied nor intended. Due to constantly changing labels, laws and regulations, the Extension Services can assume no liability for the suggested use of chemicals contained herein. Pesticides must be applied legally complying with all label directions and precautions on the pesticide container and any supplemental labeling and rules of state and federal pesticide regulatory agencies. State rules and regulations and special pesticide use allowances may vary from state to state: contact your State Department of Agriculture for the rules, regulations and allowances applicable in your state and locality.
